

Matter Cycles

Name: Key
 Date:
 Block:

Instructions:

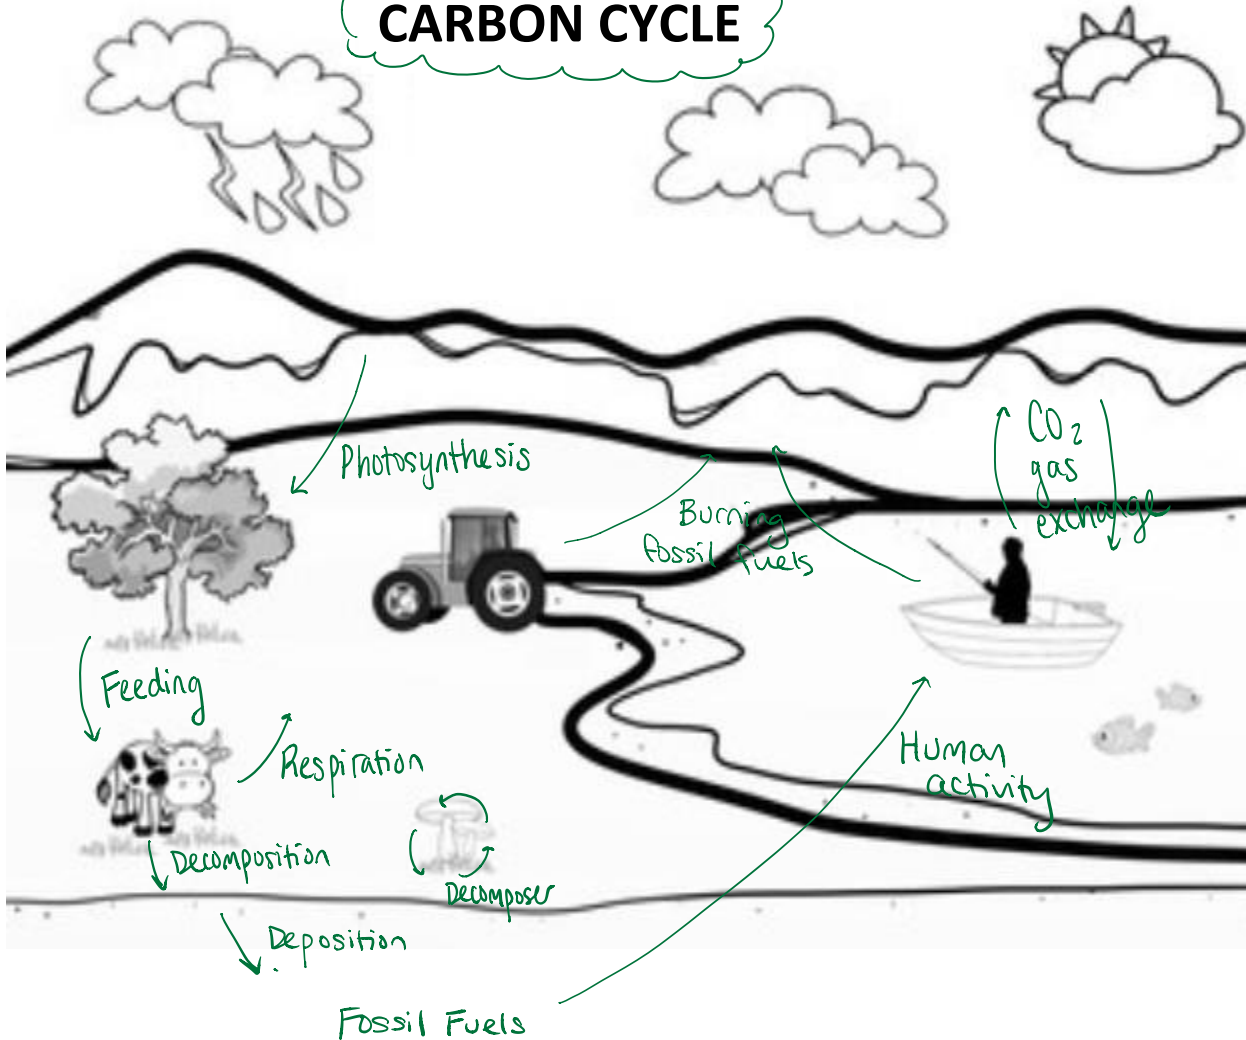

In the following diagram, represent how matter flows for each of the four major matter cycles: water, carbon, nitrogen, and phosphorus. Draw and label arrows with key terms to indicate how matter flows between each sphere and how each sphere interacts with each other. Be sure to colour code each of the matter cycles, and use all of the terms from the word bank.

WATER CYCLE

Water Cycle	
-	Condensation
-	Infiltration
-	Ground water
-	Transpiration
-	Evaporation
-	Precipitation
-	Run-off

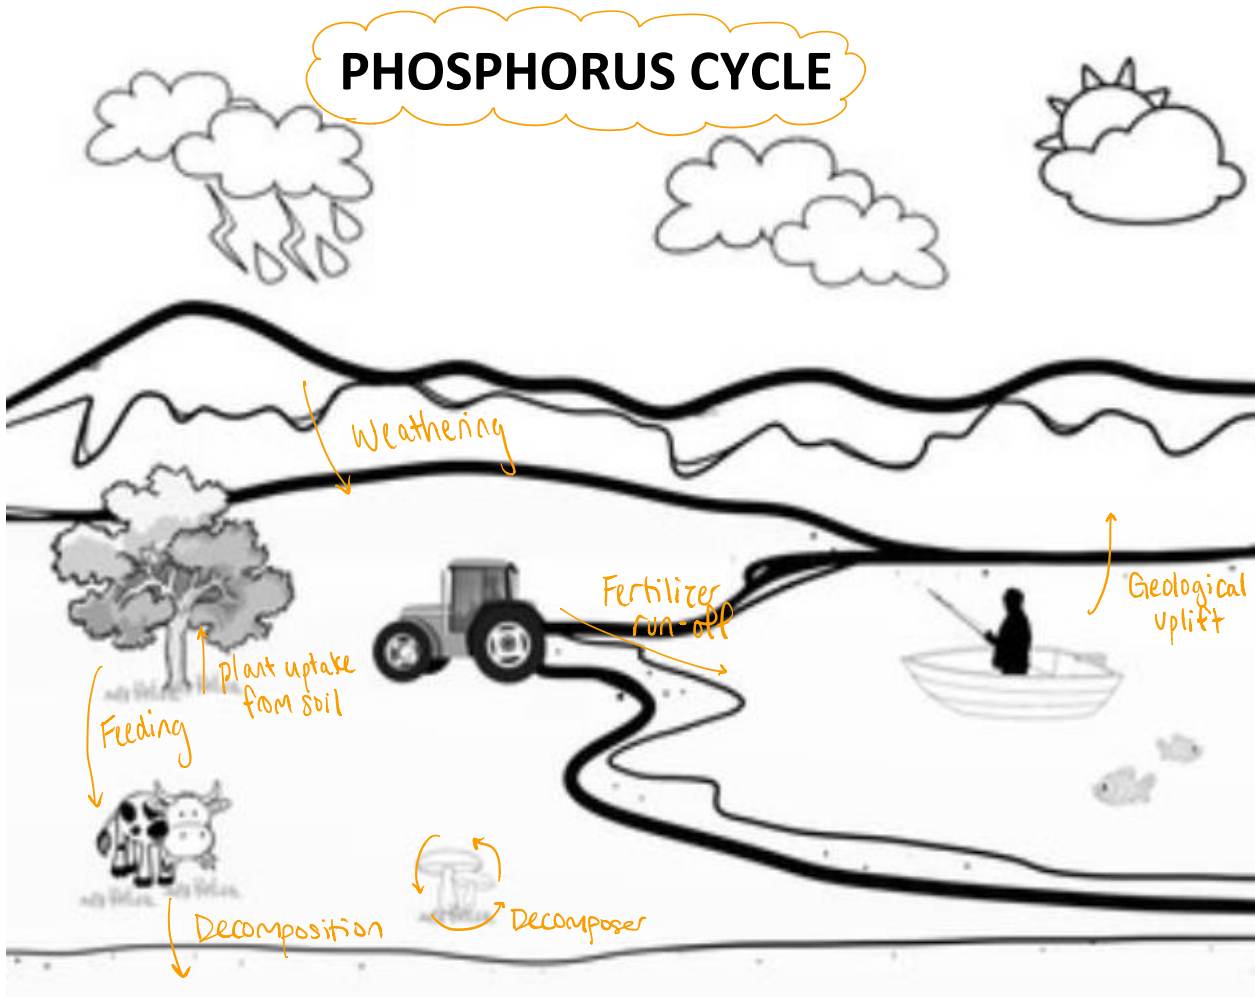

CARBON CYCLE

Carbon Cycle

- CO₂ gas exchange
- Deposition
- Respiration
- Photosynthesis
- Fossil fuels
- Human activity
- Burning fossil fuels
- Feeding
- Decomposer
- Decomposition

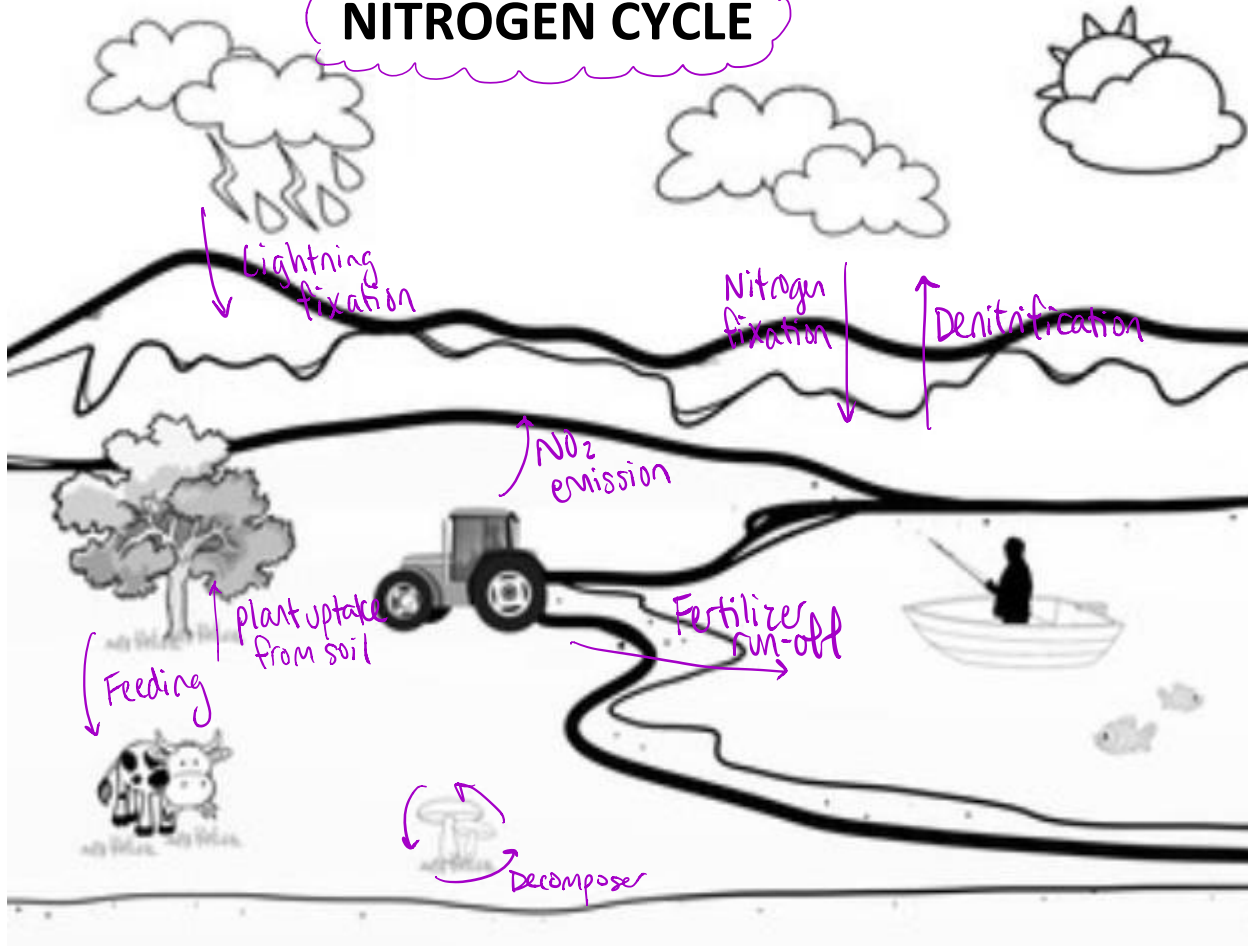

PHOSPHORUS CYCLE

Phosphorus Cycle

- Weathering
- Geological uplift
- Plant uptake from soil
- Fertilizer run-off
- Feeding
- Decomposer
- Decomposition

NITROGEN CYCLE

Nitrogen Cycle

- NO₂ emission
- Nitrogen fixation
- Denitrification
- Lightning fixation
- Plant uptake from soil
- Fertilizer run-off
- Feeding
- Decomposer
