

1. Mole Ratio
2. Gram to Gram Conversions

Mole Ratio

Predict the product and balance the following reaction.
Fill in the boxes below with the mole ratio.

The Mole Wheel

Example 1.

Aluminum chloride reacts with potassium metal. If 3.25 mol potassium metal reacted, how many moles of each product were formed?

- ⇒ What is the balanced equation?

- ⇒ What is your given?

- ⇒ What do you want to convert it to?

- ⇒ What is the mole ratio?

- ⇒ Calculate: (proper SF and units!)

Example 2.

Sodium metal reacts with oxygen gas. 0.600 mol of oxygen gas was used up. How many moles of sodium metal reacted?

- ⇒ What is the balanced equation?

- ⇒ What is your given?

- ⇒ What do you want to convert it to?

- ⇒ What is the mole ratio?

- ⇒ Calculate: (proper SF and units!)

Practice 1.

Nitrogen gas and hydrogen gas react together. If 9.43 mol of the product was formed, how many moles of nitrogen gas and hydrogen gas were used up?

Practice 2.

Copper(II)oxide reacts with phosphorus. What product is formed? If 5.692 mol of copper (II) oxide reacts, how many moles of phosphorus also react? How many moles of the product are formed?

Practice 3.

7.11 g of H_2SO_4 reacts with sodium hydroxide. How many mol of the base is necessary for this reaction?

Gram to Gram Conversions

Example 1:

Consider the reaction of magnesium metal with oxygen. If 3.26 g of Mg reacted, how many **grams of oxygen** reacted?

- ⇒ What is the balanced equation?

- ⇒ What is your given?

- ⇒ What do you want to convert it to?

- ⇒ What is the mole ratio?

- ⇒ Calculate: (proper SF and units!)

Example 2:

If 5.78g of copper (II) phosphide decomposes, how much of each product is produced?

- ⇒ What is the balanced equation?

- ⇒ What is your given?

- ⇒ What do you want to convert it to?

- ⇒ What is the mole ratio?

- ⇒ Calculate: (proper SF and units!)

Example 3.

Lead reacts with iron (II) sulphate. If 1.12 g of lead (II) sulphate is produced, how many grams of each reactant was used?

- ⇒ What is the balanced equation?

- ⇒ What is your given?

- ⇒ What do you want to convert it to?

- ⇒ What is the mole ratio?

- ⇒ Calculate: (proper SF and units!)

Practice 1.

Sodium metal reacts with iron (II) chloride. How many grams of both products are produced when 5.00g of sodium metal is reacted?

Practice 2.

Aluminum reacts with Fe_2O_3 to give aluminum oxide and iron. If 40.2 g of iron are produced, find the masses of the other chemicals involved.
